HACKATHON AND PROJECTS

1. CRM Enhanced AI Track Challenge

Hack-NU-thon 4.0 2023 (Winner)

- The definition was to solve and make revolution in the current CRM Model that can help to make user experience easier.
- The Website which we have made provides an AI chatbot which was specifically made for a given CRM website which helps to navigate New/Existing users to find data or to solve any query regarding the website.
- The website was also providing sentiment analysis for the management team to get track of their user review in a more specific way.

2. Mobile App called "Urgent"

EduHack 1.0 2023 (2nd Runner's Up)

- The application was based on the Human SOS theme.
- The definition was to build an application that helps humans in their emergencies, like serious diseases, accidental situations, fire accidents, women's safety, etc.

VOLUNTEER

1.Volunteered as a **Mentor** in

Muskurahat Foundation

INTERESTS

Music
Traveling
Sports

LEARNING CERTIFICATION

1. Android Mobile Application Development (From IGNOU/Swayam)

2. The Complete React.js (From Udemy)

3. Learning SQL Programming (From LinkedIn)

4. PHP learning (From Udemy)

OTHER CERTIFICATION

1. Guinness book of World Record in Hand Drums.

2. Truinfador Football tournament- gold medal winner at district level

3. Online Appointment Booking

DUHacks 2.0 2023

- The real-time appointment booking system was built during this hackathon.
- It was an open theme to build an application where we built a website that was online appointment booking at a doctor's clinic and got the token as a message.
- It helps patients book appointments using a simple interface, avoiding calls to the desk, and they can track the waiting queue too.

4. Mobile App For blind people

Gujarat Hackathon 2022

- The definition was to build an app that can help blind people to connect with appropriate writers in examination.
- The application took a quick test of people who appeared as writers to help blind people and based on the test result they put the profile of those writers in blind people's module.
- Blind people identify them with talkback features which provide them so they can hear and process further.

5. Cure – (Doctor's Prescription using

Voice command and SMS System)

Hackathon India 2021

- The definition was to create an application that could help a doctor to fill the prescription using their voice.
- After filling the prescription, they can send the prescription to the patient's phone number as an SMS.
- The prototype was successfully created and the team found a new future scope after the first prototype's success.
